Pause, duplicate and delete a bot

Bots & rules · https://rulemancer.com/blog/docs/manage-bots/

Every change is reversible except deletion, and deletion keeps your trade history.

Pause instead of stopping

Pause stops the bot from acting but keeps its open position, history and settings. **Stop** ends the run; a stopped bot can be restarted but starts a new run in the log. When in doubt, pause.

Duplicate to test a variant

Duplicating copies the rule and the risk settings into a new draft bot. That is the safe way to compare two exits: keep the original running, change only the stop on the copy.

Delete

Deleting removes the bot from your list. Closed trades stay in Trade History and in Portfolio analytics, so the record of what happened survives the bot.

Emergency stop

The emergency stop on the bots page pauses every running bot for your account in one action. Use it when the market moves in a way your rules were not written for — then decide per bot whether to resume.
